

Abstract

[0026] The invention is directed to a door leaf drive with a system carrier (1) on which a door closer (6) and other components are arranged. The door closer (6) is arranged at the system carrier (1) in such a way that its drive axle (8) lies as close as possible to one end of the system carrier (1). In this way, a door leaf drive is provided which is constructed in a simple manner and is easy to service but which nevertheless has only small dimensions.
